Comment on se-2021-119

Liam Bullock (Editor)

Editor comment on "Application of lithogeochemical and pyrite trace element data for the determination of vectors to ore in the Raja Au–Co prospect, northern Finland" by Sara Raič et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-119-EC1>, 2021

Summary of reviewer outcomes for the manuscript "Application of lithogeochemical and pyrite trace element data for the determination of vectors to ore in the Raja Au-Co prospect, northern Finland." By Sara Raič et al.

Please address the following revisions ahead of resubmission:

- The reviewers both point to the excellent scientific content of the study but suggest that the authors to try to synthesize and reduce the length of the text, avoiding unnecessary background information and repetition. The specific comments should help to cut down on some of the text.
- Figures and figure captions should be double-checked for missing statements, text and image size.
- Both reviewers provide specific comments that should be addressed or discussed.

Thank you again for your submission, I'm looking forward to seeing the final revised version and print.

Best regards,

Dr. Liam Bullock
