Comment on se-2021-14

Paul Tackley (Referee)

Referee comment on "101 geodynamic modelling: how to design, interpret, and communicate numerical studies of the solid Earth" by Iris van Zelst et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-14-RC1>, 2021

This is an "educational" paper; it is not presenting new science or techniques, but instead is introducing newcomers to geodynamical modelling. As such, it is very good, and I have only some corrections and suggestions detailed in the attached report.
