Comment on se-2021-32

Mehdi Zare (Referee)

Referee comment on "Imaging crustal structures through a passive seismic imaging approach in a mining area in Saxony, Germany" by Hossein Hassani et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-32-RC1>, 2021

I am convinced that the article is representing an interesting study.

However I suggest that the author add the uncertainty level of P-phase picking, as well as the used seismic events will be presented in the manuscript, mentioning their time, magnitude and locations (if possible).
