Comment on se-2021-35

Anonymous Referee #2

Referee comment on "A revised image of the instrumental seismicity in the Lodi area (Po Plain, Italy)" by Laura Peruzza et al., Solid Earth Discuss.,
<https://doi.org/10.5194/se-2021-35-RC2>, 2021

The topic of the paper is certainly interesting for the scientific community. In particular and beyond the 'local' interest about the seismotectonics of the investigated area, the major outcomes of the paper will raise awareness to end-users of seismological data.

In some sections the text seems slightly verbose, but I guess it is a matter of writing style and/or of scientific background of the potential reader.

I 'pencilled' minor corrections on the attached file
