Comment on se-2021-70

Virginia Toy (Editor)

Editor comment on "Raman spectroscopy in thrust-stacked carbonates: an investigation of spectral parameters in strained samples" by Lauren Kedar et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-70-EC1>, 2021

Dear Lauren

We have now recieved three peer reviews of your manuscript. All of these reviewers expressed substantial concerns - particularly about the methods you employ. Nevertheless, I think that it is possible for you to address their comments in a major revision of the manuscript and encourage you to prepare one carefully addressing all of their concerns.

Regards, Virginia Toy
