Editor comment on "Late Quaternary faulting in southern Matese (central Italy): implications for earthquake potential in the southern Apennines" by Paolo Boncio et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-73-EC2>, 2021

The AE very much appreciates the detailed and constructive comments presented by this reviewer. In particular, the simple stratigraphic arguments precluding fault offset, shown on the cross sections, will have to be addressed by the authors.
