Comment on se-2021-73

Ettore Valente (Referee)

Referee comment on "Late Quaternary faulting in the southern Matese (Italy): implications for earthquake potential and slip rate variability in the southern Apennines" by Paolo Boncio et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-73-RC2>, 2021

Dear Authors,

you will find attached my comments.

Overall, I think the paper is pretty interesting and may be suitable for publication in Solid Earth. It anyway deserves partial re-thinking and re-organisation of the Results and Discussion section, which should be more clearly distinguished.

I hope you will find my comments useful to increase the scientific interest of your paper.

Ettore Valente
