Referee comment on "Aegean-style extensional deformation in the contractional southern Dinarides: Incipient normal fault scarps in Montenegro" by Peter Biermanns et al., Solid Earth Discuss., <https://doi.org/10.5194/se-2021-97-RC3>, 2021

---

I thank the authors for their response to my review. Overall, I am contented with the response, in that the authors have said that they will make changes on some points and have defended themselves on others. It is hard to tell without seeing the final manuscript, but for now I think we can proceed and I have no comments to add in response to their comments.
