Community comment on "Environmental behaviors of (*E*) pyriminobac-methyl in agricultural soils" by Wenwen Zhou et al., SOIL Discuss.,
<https://doi.org/10.5194/soil-2021-103-CC1>, 2021

This study provide results on herbicide EPM behaviour in paddy soils. I think that these experimental data bay help understand this compound in risk assessment.

Suggestions:

1. For degradation study, did the author test the degradation products by MASS or other detection means?
2. It's recommended to provide the analytical method performance in validation, and typical chromatograms.
