Erika Foster (Referee)

Referee comment on "Synergy between compost and cover crops in a Mediterranean row crop system leads to increased subsoil carbon storage" by Daniel Rath et al., SOIL Discuss., <https://doi.org/10.5194/soil-2021-19-RC3>, 2021

I also want to emphasize the potential important contribution of this paper to determine best practices for deep soil C sequestration using cover crops, particularly leveraging the historical dataset.
