Author comment on "Content of soil organic carbon and labile fractions depend on local combinations of mineral-phase characteristics" by Malte Ortner et al., SOIL Discuss., <https://doi.org/10.5194/soil-2021-81-AC1>, 2021

Dear Reviewer #1

Many thanks for your time and effort to read and comment our manuscript. You mentioned important points, for which we are very grateful. Based on your comments as well on the notes of Reviewer #2, we changed and hopefully improved our manuscript. To view the comments please see the attached PDF. There we answered all comments point by point.

Please also note the supplement to this comment:
