Author comment on "Content of soil organic carbon and labile fractions depend on local combinations of mineral-phase characteristics" by Malte Ortner et al., SOIL Discuss.,
<https://doi.org/10.5194/soil-2021-81-AC2>, 2021

Dear Reviewer #2

many thanks for your efforts and time to read and comment our manuscript. We are very thankful that you raised up important points. Based on your comments and the comments of Reviewer #1, we changed and hopefully improved our manuscript. We answered to all of your comments point by point. To view these comments please see the attached PDF.

Please also note the supplement to this comment:
