Received and published: 26 February 2021

We would like to thank reviewer #2 for an encouraging review. The primary criticism echoes that of reviewer #1, to provide more detail on the isochronal layer tracing scheme and how variables are transferred between it and the host model. We agree with this criticism and will address it in the revised manuscript. The goal is to have a reproducible description that will serve as a technical reference for future papers. We plan to add technical details of the coupling with the host model in Section 2.4 and propose adding a flowchart to illustrate how and when information flows.
