Referee comment on "Edge displacement scores" by Arne Melsom, The Cryosphere
Discuss., <https://doi.org/10.5194/tc-2020-361-RC1>, 2021

The paper is overall good but not clear. The authors describe a new method of assigning scores to ice-edge displacements. It was not very evident how useful and applicable the method would be in practice. It was also not clear what advantages or trade-offs the method can have over pre-existing verification metrics.
