Author comment on "A probabilistic seabed–ice keel interaction model" by Frédéric Dupont et al., The Cryosphere Discuss., <https://doi.org/10.5194/tc-2021-273-AC3>, 2022

---

This sounds quite interesting. if you could retain the standard deviation of the approximation (or better, of the original bathy data in each cell)], then you could use this value instead of the user-defined `sigma_b`. The Adcroft reference is quite useful too and was added in the paper as an example of subgrid bathymetry applications.
