Community comment on "Indication of high basal melting at the EastGRIP drill site on the Northeast Greenland Ice Stream" by Ole Zeising and Angelika Humbert, The Cryosphere Discuss., <https://doi.org/10.5194/tc-2021-37-CC2>, 2021

Thanks for pointing me in the right direction. Now, I see on Line 183, that "a melt rate of at least 0.16m a^{-1} corresponds to a heat flux of [at least] 1.56Wm^{-2} ". That confirms the mental math I was doing. OK, wow!

.
