Community comment on "MOSAiC drift expedition from October 2019 to July 2020: sea ice conditions from space and comparison with previous years" by Thomas Krumpen et al., The Cryosphere Discuss., <https://doi.org/10.5194/tc-2021-80-CC3>, 2021

We have now confirmation from the onboard meteorologist: on 19 April there was wet snowfall and in the evening a short period of (liquid) drizzle. Temperatures reached +0.2°C.

We will update this in the next version and acknowledge the observations by meteorologist Robert Hausen.
