Comment on tc-2021-88

Anonymous Referee #1

Referee comment on "Comment on "Ice content and interannual water storage changes of an active rock glacier in the dry Andes of Argentina" by Halla et al. (2021)" by W. Brian Whalley, The Cryosphere Discuss., <https://doi.org/10.5194/tc-2021-88-RC1>, 2021

The author presents an alternative view regarding the origin of Dos Lenguas rock glacier studied by Halla et al. (2021). It is not always possible to determine the origin of rock glaciers in a clear and unequivocal manner, but the author's argument is sufficiently convincing to warrant a careful examination by the authors of the Halla et al. paper using their geophysical data. I suggest that this commentary be accepted for publication.
