Author comment on "Analysis of the Campinas tornado (Brazil) in June 2016: damage track, radar characteristics and lightning observations of the supercell" by Lucí Hidalgo Nunes et al., Weather Clim. Dynam. Discuss., <https://doi.org/10.5194/wcd-2021-35-AC3>, 2021

Dear RC2,

Thank you for your careful reading of our manuscript, and for the points raised. Your suggestions certainly contribute to a more complete and robust manuscript.

We believe in our ability to absorb the suggestions and/or justify some of the points raised, although some may be difficult to solve due to lack of data that allows further analysis. But it became clear for us that some more information must be provided and better explained to clarify the text: we agree and appreciate that.

However, based on your arguments, the editor expressed his hesitation in inviting us to submit a revised version of our paper. With that, we decided to withdraw the submission.

Thanks again for your time.

Prof. Lucí Hidalgo Nunes
