Francisco d N Santos et al.

Author comment on "Data-driven farm-wide fatigue estimation on jacket-foundation OWTs for multiple SHM setups" by Francisco d N Santos et al., Wind Energ. Sci. Discuss., <https://doi.org/10.5194/wes-2021-76-AC4>, 2021

The initial response pdf file to RC1 mistakenly quoted the revised version of the manuscript (mismatch between referenced figures). In the response to the comment:

-Could you move the schematic diagram presented in Fig. 15 related to the farm-wide DEL to the methodology section?

It should be read:

The author hopes that the discussion of the first comment regarding the methodology makes this suggestion unnecessary. The sentence: "Figure 15 schematizes the pipeline for the farm-wide model, consisting in the parts of Figure 4 which are kept for producing DEL estimations - the 10-minute feature generation and DEL predictions tiers, in grey and pale yellow, respectively". has been added to page 24 line 548.

An updated version of the reply is hereby enclosed as supplement.

Please also note the supplement to this comment:
