Comment on wes-2022-42

Gerard Schepers (Referee)

Referee comment on "On the laminar–turbulent transition mechanism on megawatt wind turbine blades operating in atmospheric flow" by Brandon Arthur Lobo et al., Wind Energ. Sci. Discuss., <https://doi.org/10.5194/wes-2022-42-RC1>, 2022

This is very unique and relevant research so I strongly support publication.

However I think that the value of this article could become even higher by considering some improvements, many of my suggestions are "low hanging fruit" but a few are more essential.

Good luck with the finalisation of this nice article!

Gerard
