Comment on wes-2022-42

Ryan Scott (Referee)

Referee comment on "On the laminar–turbulent transition mechanism on megawatt wind turbine blades operating in atmospheric flow" by Brandon Arthur Lobo et al., Wind Energ. Sci. Discuss., <https://doi.org/10.5194/wes-2022-42-RC2>, 2022

This is an interesting article with well-founded conclusions which will benefit wind energy as well as the general understanding of boundary layer phenomena. I recommend the article for publication provided the authors address the suggestions included in the attached supplement.

Please also note the supplement to this comment:
